Education

Ph.D. in Physics — São Paulo, Brazil
University of Campinas - UNICAMP — *2015 - Current*

M.Sc. in Physics — São Paulo, Brazil
University of Campinas - UNICAMP — *2013 - 2015*

B.Sc. in Physics — Lima, Peru
National University of Engineering - UNI — *2006 - 2012*

Summary

- Experience working with optics and photonics, with emphasis on the experimental work.
- Strong capacity to design science experiments and automate sophisticated instruments.
- Proficient in a variety of specialized computer programs to acquire, analyze, and visualize data.
- Considerable experience teaching students at the undergraduate level.

Languages

Spanish Native **Portuguese** Fluent **English** Professional

Projects

Kerr optical frequency comb generation in silica microresonators

UNICAMP, 2016-2020

Optical frequency combs (OFCs) are energy-efficient light sources consisting of a series of discrete equally spaced lines in the frequency domain. OFCs can be used for frequency metrology, precision spectroscopy, distance measurement or telecommunications, just to name a few applications. In this project, we engineered the group velocity dispersion of silica microresonators to generate more suitable OFCs via the Kerr nonlinearity. For example, in wedge microresonator we did it by controlling its sidewall angle without affecting significantly the free spectral range. In spherical microresonator, we used ALD alumina coatings of different thicknesses with the same intention. We published our findings in scientific journals like Optics Letters and APL Photonics. My contribution to this project was principally in the experimental work, automating instruments, acquiring and analyzing data. Among others things, I wrote Python scripts with different objectives like identifying and characterizing all mode families through their optical properties (e.g., quality-factor or extinction ratio) or analyzing the dispersion of the microresonators from dense optical spectra.

Tunable light filters

SAMSUNG & UNICAMP, 2017

It was a partnership between SAMSUNG and the Device Research Laboratory (LPD-Unicamp) where I participated in contributing to the colour theory transformations and algorithms necessary to identify colors emitted by the homemade filters. For this, I used an spectrometer and a Python package for colour science.

High sensitivity spectroscopy

UNICAMP, 2014-2015

In this project, I demonstrated the possibility of using optical cavities of moderate finesse for measurements of small absorption coefficients of nearly transparent liquid and solid samples. With this sensitive technique, based on measurements of ring-down times, I isolated the absorption coefficient of liquids contained inside a transparent cuvette oriented at Brewster's angle. This project was important to acquire experience working on spectroscopy and free-space optics. Link in portuguese

Magnetic properties of CuO_2 nanoparticles on graphite and graphene

UFABC, 2012

Here, I focused on obtaining graphene from highly oriented graphite blocks using the scotch tape method. Afterwards, we obtained nanoparticles by laser ablation and deposited on graphene samples. The optical and magnetic characterization of the samples were done with the intention of detect changes in their properties.

Teaching Experience

Electric Circuits and Electromagnetism UNIVESP, 2019-II
Employed on a temporary contract by the UNIVESP in teaching-related responsibilities.

Experimental Physics IV: Alternating Current and Optics UNICAMP, 2015-II, 2016-II
Participating in the Docent Training Stage Program at UNICAMP.

Experimental Physics III: Electricity and Magnetism UNICAMP, 2014-II, 2016-I
Participating in the Docent Training Stage Program at UNICAMP.

Professional Affiliation

Optical Society of America (OSA) 2007-Current
Founder member of the OSA Student Chapter UNI, Lima, Peru. Currently, as a member of the OSA Student Chapter UNICAMP, SP, Brazil.

Computer skills

- I use Latex or Google Docs for scientific reports and Mendeley as a reference manager. For making scientific illustrations for journal articles, I use Inkscape or Adobe Ilustrator. Frequently, my presentations have been done in Impress or Google Slides.
- I use pyVISA and pyQt to control instruments and automate experiments. For data exploration and visualization, I use Jupyter notebooks, Pandas, Numpy, Scipy, Sympy, and Matplotlib.
- I use preferentially Linux as a development and production environment.
- I have a strong preference for open-source software, but if I have access to competitive proprietary software like Comsol, Mathematica or Matlab, I will be able to use them too.
- I usually use Microsoft Teams for communication and collaboration.

Certifications

I am continually updating and improving my programming skills to meet new challenges and changing needs.

- **Python for Data Science**
  Issued by IBM on 2020. The purpose of this certificate is to verify that I am able to write my own Python scripts and perform basic hands-on data analysis using Jupyter-based lab environment. See credential
- **Data Analysis Using Python**
  Issued by IBM on 2020. The purpose of this certificate is to verify that I understand the essential steps necessary to analyze data in Python using multi-dimensional arrays, manipulating DataFrames in pandas, using SciPy library of mathematical routines and performing machine learning using scikit-learn. See credential
- **Data Visualization Using Python**
  Issued by IBM on 2020. The purpose of this certificate is to verify that I understand how Python libraries such as Matplotib, Seaborn and Folium are used for the creation and customization of graphical representation outputs for both small and large-scale data sets. See credential
- **Applied Data Science with Python**
  Issued by IBM on 2020. The purpose of this certificate is to verify that I am able to code in Python for data science. I can analyze and visualize data with Python with packages like scikit-learn, matplotlib and bokeh. See credential

Interests

- Microcomb technology
